INFORMATION BULLETIN
Requirement for Fire Suppression/Alarm
Plans Prior to Interior Lathe Inspection

Ref No
IB1003

ATTENTION:

On January 1, 2012, The City of Bakersfield Building Division will change inspection request procedures for commercial projects. When a commercial project requires a Fire Suppression System, Fire Alarms System or modification to a Fire Suppression System or Fire Alarms System the contractor shall have the plans for said system on the job site at the Rough Frame Inspection. Further, the Fire Suppression System, Fire Alarms System or modification to system plans shall be submitted to the Fire Prevention Service Division prior to an Interior Lathe Inspection. An Interior Lathe Inspection will not be conducted until Fire Prevention Service conveys to the Building Division that plans have been submitted.

I have read and understand the inspection procedures required by the City of Bakersfield Building Division related to Fire Suppression Systems and Fire Alarm systems. I understand if Fire Suppression System/Alarm System or modification thereto is required, my Fire Suppression System and/or Fire Alarm System plans shall be on the job site at the Rough Frame Inspection and shall be submitted to the Fire Prevention Service prior to requesting an Interior Lathe Inspection. I further acknowledge I will not receive an Interior Lathe inspection until Fire Prevention Service staff has notified Building Division Staff that this condition has been met.
